Tool and method for riser supply nut removal or installation

Abstract

A tool is provided for installing a faucet water supply tube nut on a faucet assembly at the underside of a faucet lavatory by manually seating the supply tube nut securely inside the hexagonal socket at either end of the tool alignning the supply tube nut with the lavatory faucet supply nipple and turning the tool 360 degrees tightening or loosening the nut and then sliding the tool down the supply tube to the water supply riser nut and seating the tool on the riser nut and aligning the riser nut with the threaded riser nipple of the angular shut off valve and is again turned 360 degrees until fully tightened or loosened depending on the need of the user.
